

Instructions

Task Intro

 **Welcome!**

We're currently developing an AI assistant  that helps you complete tasks through a web browser. We need your detailed feedback to help develop a more helpful and accurate AI assistant.

 **Important Note: LLM usage is strictly prohibited on tasks. Any usage detected will result in termination from the project.**

 Here's what you'll be doing:	 How to Evaluate:
You will see a user's request (prompt), along with two attempts to solve it (Response A and Response B). We need your expert eye to help us	To make your evaluation as useful as possible, please move beyond a simple " gut feeling. " Instead, use the specific criteria provided to conduct a <i>fair and</i>

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

KEY WARNING: YOUR RATING JUSTIFICATIONS NEED TO BE IN VERY SPECIFIC FORMATS FOR EACH RATING:

- **Completion:** Identify the prompt, the main goal of the request, and any sub requests. Then, summarize your investigation+rating on completion of each request.
- **Factual accuracy:** List all factual claims, use the justification builder for each, then summarize the final verdict.
- **AI Performance:** Focus on the key areas to observe (Navigation, Interaction, Efficiency, and Output Quality).
- **Best Response:** Use the template summarizing all individual scores + the SxS verdict, followed by a justification referencing the ratings and key tiebreakers.

Tools

On the right-hand side of the UI, there are various tools you can make use of:

-  **Click “Show Instructions”** to see detailed instructions any time.
-  **Take Notes:** These can help you compile effective reasoning behind your rating. [Strive to distinguish between main claims and secondary constraints.](#)

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

The success tools workflow is as follows:

Instructions

 **Top Tip!** It can be helpful to take notes during your evaluation! You can use our handy note-taking feature.

 **Use the guides provided in these instructions to help you.**

Overview

 **Your Role:** Be a detective. Use the checklist to find the specific evidence for why one response is better, and report your findings.

To build your case, you will gather evidence by evaluating each

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

-  **Factual Accuracy:** How accurate are any facts or information provided?
-  **AI Performance:** How would you rate the skill, quality and efficiency of the AI?
-  **Best Response:** After weighing all the evidence, this is your final conclusion.
-  **Reporting Roadblocks:** You will also be asked to report any technical problems that blocked or interfered with your investigation.

Question 1: Was completion of the task blocked by any unusual errors or crashes?

If the agent faced any unusual errors or crashes during the task, mark

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

Question 2: Task Completion

Your goal here is to determine how well the AI completed **every part** of the user's request. A successful response doesn't just get the main idea right; it follows all the specific rules and instructions.

Follow these three steps to build your case and make an accurate rating:

Step 1: 🧐 Analyze the Prompt

Before looking at the responses, become an expert on the user's request. A single missed detail can change the entire case!

- **Identify the Main Goal:** What is the user trying to achieve?
- **List all Sub-requests:** What are the specific constraints, rules, or secondary tasks mentioned? (e.g., specific location, date, price, website, etc.)

Use this template to help organize your thoughts:

User's Main Goal: (e.g., "Find and compare vacation rentals.")

Sub-requests:

1. (e.g., "Must be in Scottsdale")

Published using Google Docs

[Report abuse](#)[Learn more](#)

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

Prompt **Main Goal**Prompt **Sub-Requests****User Request****Step 2:** ★ Select your Rating

Now, use your "Case File" from Step 1 as a checklist. For each response (A and B), check if it met the Main Goal and **every single** Sub-request.

- For a **"Fully Complete" (5/5) rating**: Addressed all the parts of the request, including useful unspoken details)e.g., providing multiple options when asked for "a few")
- For a **"Mostly Complete" (4/5) rating**: Addressed the main goal of the request but missed a minor subtask or detail. But it didn't affect the main goal of the task.
- For a **"Partially Complete" (3/5)**: Addressed a significant part of the request but failed to deliver on the main goal or missed secondary goals.
- For a **"Minimally Complete" (2/5)**: Attempted the task but failed to address the main request, providing only tangential or minimally useful information.
- For a **"Not at all complete" (1/5)**: The task is completely failure. It doesn't contain any useful information.

Use this template to help organize your thoughts:
For each Response:

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

- Sub-request 2: [Yes/No]
- Sub-request 3: [Yes/No]
- Final Rating: [Rating]
- Justification: [Briefly explain how you came to your conclusion]

Ask yourself: Does the user want it this way, or did the agent respond outside the boundaries?

User request					
Main Goal	Sub-request 1	Sub-request 2	Sub-request 3	Useful additional	Task Completion
Yes	Yes	Yes	Yes	Yes	Fully
Yes	Yes	Yes	No	No	Mostly
Yes	No	No	No	No	Partially
No	Yes	Yes	Yes	Yes	Partially
No	No	No	Yes	Yes	Minimally
No	No	No	No	No	Not at all

Step 3: 🍌 Write Your Justification

Your justification is your final report. It's the most valuable part of your investigation because it explains the **evidence** behind your rating, [and](#)

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

Example of a Good Justification

Prompt: *Find me a few VRBO or AirBnb options in Scottsdale for the week of Valentine's Day for a group of 4.*

Case File:

- **Main Goal:** Find and compare vacation rentals.
- **Sub-requests:** Must be in Scottsdale, must be for a group of 4, must provide multiple ("a few") options.

Investigation Notes:

- **Response A** met the main goal and all 3 sub-requests, earning a **5/5 (Fully Complete)**.
 - *Justification:* The response successfully met the main goal and all three sub-requests. It provided three relevant options that matched every constraint in the prompt, making it a perfect and useful answer.
- **Response B** met the main goal but failed all 3 sub-requests, earning a **2/5 (Minimally)**

Published using Google Docs

[Report abuse](#)[Learn more](#)

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

instead of Scottsdale), the group size was incorrect (2 people instead of 4), and it only provided a single option.

Final Verdict: "I chose Response A as much better. The primary and deciding factor was Task Completion. Response A successfully addressed every part of the prompt; [all the results are located in Scottsdale, for a group of 4, and have multiple options, as can be verified in the sources](#). In stark contrast, Response B failed on every single sub-request, making it completely irrelevant to the user's needs [because the results are from Phoenix](#). This made Response A a useful and actionable answer, while Response B was unhelpful."

[Note that the structure of the justification clearly identifies the reason why response A complies with the restrictions, while response B clearly explains why it is not useful.](#)

Question 3: Factual Accuracy

NOTE: You can use the handy **Justification Builder** found in the side toolbar to help structure your justification.

What is a Claim? (Objective vs. Subjective)

A claim is any statement in the response that can be checked for accuracy. It can be proven either true or false. You should only fact-check objective claims.

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

-  Subjective: A statement of opinion, belief, or personal feeling. It cannot be proven true or false.

- *Example: "The Eiffel Tower is beautiful."*

Note: Be careful, expressions such as “always,” “definitely,” and “without a doubt” are often linked to biased reasoning. In these cases, it will be necessary to rely on evidence from sources to determine whether it can be objectively verified.

Example: How to Identify Claims

Be thorough! Break down the response into individual, numbered claims. Don't combine multiple ideas into a single claim.

Prompt: *What is Haku's true identity in Spirited Away?*

Response: *Haku's true identity is a fascinating part of the Spirited Away story! In the film, Haku is a mysterious boy who works at the bathhouse and helps Chihiro navigate the spirit world. However, it's later revealed that Haku is actually the spirit of the Kohaku River. He was once a powerful river spirit, but after being injured by humans, he lost his memory and ended up working for Yubaba. When Chihiro incorrectly guesses his true identity, Haku is finally able to break free from Yubaba's control and return to his river.*

Here's how we'd identify and label the claims:

1. Haku's true identity is a fascinating part of the Spirited Away story! ( Subjective)
2. Haku is a mysterious boy who works at the bathhouse and

Published using Google Docs

[Report abuse](#)[Learn more](#)

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

humans, he lost his memory and ended up working for Yubaba. (✅ Objective)

5. When Chihiro *incorrectly* guesses his true identity, Haku is finally able to break free... (✅ Objective - and in this case, **factually wrong!**)

How to Research Claims & Find Reputable Sources

Use reliable sources to verify or refute each objective claim. Don't rely on just one source!

What are Reputable Sources?

- Authority: Is the source a known expert? (e.g., a scientific journal, a respected museum)
- Objectivity: Is the source fair and unbiased?
- Accuracy: Is the source known for being correct?
- Currency: Is the information up-to-date?

Good Examples: Encyclopedias (like Britannica), academic journals, reputable news organizations (like the New York Times, BBC, Reuters), government websites, official company/organization websites.

Less Reliable Examples: Wikipedia or Fandom Wiki (good for starting, not for final proof), personal blogs, social media posts, websites with obvious bias.

[Report abuse](#)[Learn more](#)

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

Stay focused: In many cases, it is as simple as confirming that “most viewers like to watch streaming series on weekends in the US” with a statistical link from a reputable source. Note that this does not claim that everyone does so, only that it is true of “viewers of streaming series in the US,” not the entire population. *This could save a significant amount of research time; the keywords are crucial.*

Choose the best option available:

1. **Completely accurate:** All factual claims are supported by reputable evidence.
2. **Mostly Accurate:** Contains minor inaccuracies that don’t spoil the overall response.
3. **Mixed Accuracy:** Contains a significant mix of both accurate and inaccurate information.
4. **Mostly Inaccurate:** The core information is factually incorrect or misleading.
5. **Completely Inaccurate:** The entire response is based on false information.
6. **Cannot Confidentially Assess:** Unable to understand, identify, or properly assess the claims in this response.

Justification Template

Use this if you don’t use the Justification Builder.

Objective Claims Identified:

1. [Claim 1 text...]
2. [Claim 2 text...]

your reasoning, referencing the sources.] Sources:
[Source 1 URL] [Source 2 URL]

Claim 2: [Rating Given] Justification: [Brief explanation of
your reasoning, referencing the sources.] Sources:
[Source 1 URL] [Source 2 URL]

Final Justification: [Overall summary of the response's
accuracy.]

***Note:** If verification links are broken or lead to 404 errors, refer to the
FAQ Section: Broken Links for specific grading penalties. If the
response get stuck on a CAPTCHA also refer to the FAQ.

Question 4. AI Performance

This question is different from the others. We're not just looking at the
final answer. We're judging the **skill and intelligence** the AI showed
along the way. Think of yourself as a performance reviewer watching
the AI work.

The key question is: Did the AI achieve the goal gracefully and
efficiently, or did it stumble and get lucky?

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

meander to irrelevant pages?

-  Interaction: Did it click the correct buttons and links precisely, or did it struggle and make mistakes?
-  Efficiency: Were there wasted steps, loops, or unnecessary actions?
-  Output Quality: Is the final scraped text clean and well-formatted, or messy and filled with junk?

★ How to Apply the 5-Point Scale

Here's a breakdown of what each rating means, with concrete examples. Click on each rating to see the details.

(5) Excellent (Expert & Optimal)

- Ask yourself: Was this a flawless, expert-level performance?
- Look for: Direct navigation, precise clicks, no wasted steps, and a clean final output. The AI behaved exactly as a skilled human would.

(4) Good (Effective but with minor flaws)

- Ask yourself: Was it almost perfect, but with one small mistake?
- Look for: A solid and logical process that had one minor, observable flaw. For example, it took one extra, unnecessary click, or the final output had a tiny formatting error.

(3) Acceptable (Clumsy but Functional)

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

an ad before correcting itself), or a messy but still usable final output.

(2) Poor (Illogical & Flawed)

- Ask yourself: Was the process itself a failure, even if it got a tiny bit of the answer right?
- Look for: Illogical steps where the AI seems confused or lost. It might struggle repeatedly to find the right button, or it only succeeded by chance, not by skill.

(1) Unacceptable (Broken or Nonsensical)

- Ask yourself: Did the AI completely fail to perform the actions required?
- Look for: Getting stuck on a page, being caught in a loop, timing out, or being fundamentally incapable of interacting with the website correctly.
- **Important:** If the response gets stuck on a CAPTCHA or security check it is always rated as **Unacceptable (1/5)** performance. See the **FAQ: CAPTCHA Handling** for a visual example and more details.

How to Write a Good Justification

Your justification should explain the specific actions that led to your rating. **Reference the key areas of observation (Navigation, Interaction, Efficiency, and Output Quality).**

Use this template to help structure your thoughts:

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

Best Response: (e.g., "Response A, significantly.")
Justification:

Best Response Guide

 You've investigated both responses and collected your evidence by answering the detailed questions. Now it's time to make your final call and write your report (rationale).

 How to Compare and Decide

First, review your scores for each response side-by-side to identify the key differences.

Question	Your Score for A	Your Score for B
Task Completion	[e.g., 5]	[e.g., 3]
Factual Accuracy	[e.g., 5]	[e.g., 5]
AI Performance	[e.g., 4]	[e.g., 5]

Published using Google Docs

[Report abuse](#)[Learn more](#)

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

Performance: A clumsy response that gets the right answer is better than a graceful response that gets the wrong answer.

Example: `""Response A fully completed the task by adhering to all requests. In contrast, Response B failed on a key sub-request, making it significantly less useful." *`

-  **Performance is the Tie-Breaker:** If both responses are correct and complete, use **AI Performance** to decide which is "slightly better." The more efficient and skillful agent wins.

Example: `""While both responses were fully accurate, Response A's skillful and efficient navigation made it a higher-quality response overall." *`

How to Write Your Final Report (Rationale)

Your written justification is critical! It explains the evidence behind your decision. Use the template below to structure your thoughts and be specific.

Use this template in the justification box:

Response A Scores:

- Task Completion: [Your Rating]
- Factual Accuracy: [Your Rating]

Published using Google Docs

- Task Completion: [Your Rating]

- Factual Accuracy: [Your Rating]

- AI Performance: [Your Rating]

Final Verdict: [e.g., Response A is much better.]

Justification: [Write the reason for your final recommendation, referencing the scores and Golden Rules above. Explain the *most important difference* that led to your choice.]

Reporting Roadblocks

You will also be asked to report any technical problems that blocked or interfered with your investigation.

FAQ + Other resources

*** [NEW] Frequently Asked Questions (FAQ):**
Check here first for guidance on things like edge cases, Jibble, CAPTCHAs, broken links, target AHT, etc. [FAQs Computer Use Eval](#)

Justification with limited/restricted information

On certain occasions, the agent will make statements that do not necessarily appear to be inaccurate, such as statements related to user elements that may not be accessible for public investigation. In that case, instead of simply assuming that they cannot be verified, the correct question will be, which elements provide certainty and can be verified? e.g., sometimes agents respond with “Wednesday” instead of “Thursday”, or the text states “in the morning” when the appointment is actually “in the afternoon.”

This can be verified by checking that the time slot, day of the week, and sender's name are consistent. Evidence can include a link to World Time Buddy and/or an online calendar. Remember, in some cases, it will be important to focus on what we can verify, rather than what we lack evidence for, and this is made clear through the justification.

Justification Structure example:

“The agent has access to a calendar and schedule that is not public; however, there is no evidence of any inconsistencies, such as the day of the week, time, and sender.”

Time-dependent Responses:

The timestamp of the resources and responses mentioned is the key drive here; do you have some insight into what timeline for reference is used? On the other hand, each batch could have a certain timeline reference for the client, and this must be clarified.

Get the price of the blue vase we bought on Saturday is not the same as "Search for more blue vases at a lower price than on Saturday."

In the first case, it is sufficient to obtain a reference price for the same item on the current date. In the second case, a comparison must be made between a previous price and the current price. In either case, it is sufficient to obtain a price reference; a specific amount is not necessary, but rather whether the item costs less.

Flight/Hotel history research tools:

Can you use tools like [this](#), or similar ones, to track the history of certain flight and hotel prices? In such cases, a clear reference to the source is key to staying objective; it isn't an assumption.

Task Completion

How well did the AI fulfill the user prompt?

Base your answer on the constraints you defined in the previous question.

Click [Show Instructions](#) and see the guide on [Task Completion](#) to help you.

Please provide a justification for this rating.

Enter your response here *

The response successfully met the main goal and all three sub-requests. It provided three relevant options that matched every constraint in the prompt, making it a perfect and useful answer.

It highlight the women size 6 in the screenshot as per users request.

The response provides screenshot but fails to provide links or URLs. It also mentions that as the first choice was available, I did not check for the Black or Red options, which is as per the instruction provided by the user.

[COMPUTER USE EVAL] Instructions with Task Flow + Justifications Details

Updated automatically every 5 minutes

AI Performance: 4

Final Verdict: B is better than response A

Justification: Response B successfully met the main goal and all three sub-requests. It provided three relevant options that matched every constraint in the prompt, making it a perfect and useful answer. It highlights the women's size 6 in the screenshot as per users request whereas response A fails to show the correct size in stock. The responses both provide a screenshot but fail to provide links or URLs. Additionally, response B explicitly notes that size 6 is in stock so it didn't need to search for Black or Red.
